

## Asset Inventory, Verification, and Barcoding Services

Complete facility walkthrough to verify, update, and record asset information while placing barcoded asset tags on your equipment. Data can be supplied in a variety of formats or loaded directly to your CMMS or Fixed Asset Tracking application. Whether you need asset data collected for **Facilities Engineering** or **Biomedical Engineering**, Facilities Survey's experience in hundreds of hospitals enables us to ensure you have an accurate CMMS database.

### Asset Tagging

Application of pre-printed labels to your assets. Additional options include engraved or printed tags customized with your facility information and barcode identification to facilitate asset identification.

### Inventory Scope

Facilities Survey has developed comprehensive checklists so you can determine the granularity of the data you would like to have collected. CMS customers who choose to use Facilities Survey's procedure library can be up and running quickly within days of the physical collection.

With our **CMS View** product, our field teams can place the assets at the appropriate locations directly on your electronic floorplan. This enables your tablet equipped engineering staff to easily find and complete work orders and update asset details from a drawing rather than a list.

## Additional Services

### System Optimization

- Identify functionality of your CMMS application that could be utilized to simplify the management of your system and streamline reporting.

### Database Configuration and Setup

- Configuration of a system that will be easy to operate and maintain, and will be an effective management tool

### Workflow Automation

- Reviewing your workflow processes and applying technology to recommend and implement productivity improvements.

### Preventive Maintenance Scheduling

- Workload analysis and PM requirements can be reviewed and adjusted to balance workloads evenly throughout the year.

Better Tools • Accurate Data • A Simple Decision
