Staff not able to locate the acronym	CARDIOLOGY	07/18/2017	Resolved	Mike Helleo
IV Pumps left uncharged	CARDIAC REPAIR	08/08/2017	Unresolved	Stephen Jason

- **Collaboration** – Enabling teams from different departments to work together to conduct rounds electronically using multiple devices.
- **Paperless** – Eliminating the need for paperwork consolidation and office data entry, CMS Rounding automatically consolidates the information from all team members into one cohesive package.
- **Seamless Interaction** – Upon completion of the rounds, CMS Rounding sends emails to the appropriate responsible parties for rectification of any issues found. For instance, if a deficiency is found in handwashing techniques, an email to the nursing manager informs her of this finding. After she corrects the issue, she completes it by clicking a link in the email and entering her resolution.
- **CMMS Integration** – When used with FSI's Custom Maintenance Software (CMS), CMS Rounding can automatically generate work orders for the Facilities Engineering department for items which need to be corrected. Upon work order completion, CMS Rounding automatically updates the finding.

## CMS Rounding Advantages:

### Fully Customizable

- EOC Rounds
- OSHA Rounds
- Security Rounds
- Engineering Rounds
- Life Safety Rounds
- Electronic Clipboard Inspections

### Multiple Platforms

- Windows
- Apple
- Android

### Automation

- Emails to responsible parties for correction with feedback
- CMS integration for automatic work order generation – complete the work order and resolve the finding
- Eliminate paperwork and analysis time by fully integrating the findings from multiple devices into one easily accessible interface

### Cloud Based

- Accessible from any web-connected device, CMS Rounding provides instant access to see both open and resolved findings
- Available as a stand-alone package or fully integrated with CMS
