CMS Tech is the handheld version of the most powerful and easy-to-use Computerized Maintenance Management Software.

CMS Tech is Facilities Survey's next-generation mobile offering designed for technicians to create and manage assets and work orders in the field. CMS Tech is a web-based application which adapts on various devices such as smart phones, tablets, or desktop computers.

CMS Tech functions in both online and offline modes allowing technicians to continue working in areas where there is no internet connectivity.

The **intuitive user interface** enables new users to get up and running quickly with limited training time needed, and the speed with which work orders can be filtered gives you instantaneous access to the information you need. Technicians can remotely close work orders with just a few taps on the screen.

With CMS Tech, you can complete preventive maintenance and service call work orders, enter PM data readings, capture time charges, create work orders "on the fly," and more!

Tech Advantages

Flexibility

- Work either online or offline without losing data

Save Time

- Enable technicians to be in the field longer and eliminate end-of-the-day computer work
- Retrieve and complete new work orders without returning to the office
- Record necessary data readings on preventive maintenance work orders
- Easily capture labor and material charges

Versatile Hardware

- Utilize equipment barcodes with device camera or Bluetooth-enabled barcode scanner
- CMS Tech is a "BYOD" application, so you can use your favorite smart phone or tablet
