

CMS VR360 provides a virtual instance of your mechanical rooms, allowing technicians and admins to quickly view spaces without leaving their office or walking across campus.

CMS VR360 is the modern way of virtually capturing your facility's mechanical and other environmental spaces. Easily get eyes on equipment such as fire pump valves, electrical switches and more. Assets can be virtually tagged with nameplate info or what areas they serve.

CMS VR360 lets you navigate a room and click on assets to show detailed information and work orders. CMS VR360 also enables you to attach PM videos, user manuals and other documents so all staff members have quick, visual access to the resources they need.

Integrating completely with CMS and CMS View, CMS VR360 enables you to see your workload, drill-down and view the workspace so you can gather what you need to complete the job.

With CMS VR360, capture and display knowledge and insight from your senior technicians so their replacements will have long term access once they retire.

CMS VR360 Advantages

Capturing Environments

- Quickly find the equipment you need on your floorplan – on a tablet, smart phone or computer.
- Scanning allows for accurate measurements of the space.

Virtualizing Knowledge

- Tap or click through a virtual instance of your mechanical spaces and view your assets' information.
- Quickly capture information such as areas served by specific valves
- Digitize the years of experience and knowledge that will soon retire.

Expediting Training

- With virtual representations of your mechanical room, spend less time traveling and more time training. Allow the newer members of your workforce to rapidly gain confidence in their new duties.
